

Water Security Agency

The Water Security Agency is a crown corporation of Saskatchewan responsible for the management of provincial water supply, quality, treatment, and oversees 72 dams along with related water supply channels and infrastructure.¹

Peter Lucas provided project consulting, coaching and mentorship to the existing project management team within the Water Security Agency.

The goal of the assignment was to leverage the collective knowledge of Peter Lucas in the extension of their corporate project governance program, offering scalable and customizable support throughout the entire project lifecycle.

These initiatives included:

- Expanded the proficiencies of their project management teams to handle a broader range of project sizes and complexities.
- Provided guidance on enhance the robustness of their existing core standard project processes, procedures, and templates.
- Collaboratively created the development and training of a project stage gate review and approval processes.
- Established mandatory project deliverable expectations and success criteria for stage gate compliance.
- Provided guidance on risk identification and mitigation strategies in the development of a project risk register.
- Created a project toolkit for monitoring and controlling the cost, schedule, and work breakdown structures.

These initiatives supported the stage gating and funding requirements to advance the Water Security Agency's PMO portfolio. These projects were developed with the best interest of Saskatchewan's public and stakeholders in mind.
