

Nutrien Allan Capital

Peter Lucas' project and engineering professionals act as owner's representatives and are fully integrated into Nutrien Allan's Project Management Office.

This provides several benefits to the client, including project knowledge retention and ensures the best interests of the site are considered at each phase of a project.

The Nutrien Allan mine site is an underground potash mine and milling facility located 60 km east of Saskatoon, Saskatchewan. Peter Lucas is supporting the underground and surface project teams on sustaining and investment capital initiatives.

These projects include:

Underground

- storage bin rehabilitation and construction,
- conveyors and material handling equipment,
- ventilation infrastructure,
- shop facility and underground cranes,
- borer and mining equipment rebuilds,
- loading pocket and shaft steel rehabilitation and construction,
- electrical distribution upgrades; and
- automation.

Surface

- shaft hoist brake caliper replacement,
- shaft rope change,
- shaft shive wheel replacement,
- electrical distribution upgrades,
- equipment replacement,
- 25KV substation construction and connection,
- loadout automation,
- rail line rehabilitation; and
- mill improvement projects including ducting, piping, tanks, siding, and structural steel.

Build your legacy.
