

Potash Development Scoping Study

Peter Lucas was brought in as project management and technical support for both a scoping study and environmental screening technical report of a 30,000tpy potash pilot plant for a confidential client at a site located near Wynyard, SK.

Primary responsibilities included development of the project management processes, standards, and documents to support the scoping study.

Project development work included:

- surface lease sizing,
- facility siting,
- capital and operating cost estimating,
- economic modeling,
- project scheduling,
- determining construction requirements,
- determining processing requirements,
- plant inputs and other infrastructure-related areas including power, gas, roads and pipelines,
- geology characterization,
- drilling requirement; and
- federal permitting and licensing requirements.

Total estimated project cost ~\$30MM.

Build your legacy.
